Education

Simon Fraser University — Burnaby, BC
Bachelor of Science in Computing Science — *May 2021 – Present*

Technical Skills

Data Engineering: Azure Data Factory, Azure Databricks, Azure SQL Database, Azure Data Lake Storage Gen2, ETL/ELT Pipelines, Data Modeling, PySpark, Delta Lake, Medallion Architecture, Microsoft Fabric
Data Analytics & BI: SQL, Power BI, Python, R, Pandas, NumPy, KPI Reporting, Dashboard Development, Data Visualization, BigQuery
Reporting & Analysis: Statistical Analysis, Performance Measurement, Operational Reporting, Executive Reporting, Business Intelligence, Trend Analysis
Tools: Microsoft Excel, PowerPoint, Outlook, SharePoint, Git, GitHub, Jupyter Notebook, VS Code, Adobe Acrobat
Concepts: Data Quality, Data Governance, Root Cause Analysis, Process Improvement, Evidence-Based Decision Making, Pivot Tables, Data Structures & Algorithms

Projects

Source2Insights | *Microsoft Fabric, SQL Server, SSMS, Dataflow Gen2, Power BI*

- Restored and configured an AdventureWorks SQL Server database using SSMS, integrating relational data and Excel sources into Microsoft Fabric through parameterized Data Factory pipelines.
- Orchestrated multi-table ingestion using Lookup, ForEach, and Copy Data activities, with Dataflow Gen2 transformations to prepare data across Lakehouse and Warehouse environments.
- Investigated and resolved data duplication caused by append operations, incorrect SQL joins, and inconsistent source keys; implemented SQL validation checks to ensure data accuracy.
- Developed reusable SQL views and stored procedures to populate Gold-layer fact and dimension tables, reconciling 121K+ sales records and $109.8M in sales data against source datasets.
- Created a Power BI semantic model with validated one-to-many relationships and DAX measures to analyze sales performance across customers, products, channels, and territories.

Car Sales Lakehouse Pipeline | *Python, SQL, Azure, Databricks*

- Designed and automated an end-to-end Azure data platform using Medallion Architecture to transform raw sales data into validated Bronze, Silver, and Gold datasets for analytics and reporting.
- Developed reusable PySpark and SQL transformations to clean, standardize, validate, and enrich data across multiple sources, improving consistency and downstream data quality.
- Built parameterized Azure Data Factory pipelines using stored procedures, lookup activities, and watermark tables to automate incremental data ingestion and processing.
- Created fact and dimension tables using a Star Schema and implemented SCD Type 1 processing with Delta Lake MERGE operations for analytical workloads.
- Monitored pipeline runs and execution logs, investigated failed activities and data-quality issues, and validated outputs across Azure SQL, Databricks, and ADLS Gen2.

Canada Grocery Price Analysis | *Python, Pandas, NumPy, Statsmodels*

- Designed a data analytics workflow to clean, standardize, and analyze grocery pricing data across eight Canadian vendors, supporting comparative pricing and market trend analysis.
- Implemented data cleaning, validation, and feature engineering workflows using Python and regular expressions to normalize product quantities, units, and naming conventions.
- Calculated standardized unit-price metrics and developed a Grocery Basket Index to benchmark vendors and identify meaningful pricing differences and cost-saving opportunities.
- Performed exploratory and statistical trend analysis, including LOESS smoothing, to identify seasonal pricing patterns, product variability, and long-term market trends.
- Created data visualizations and analytical summaries to communicate findings and support evidence-based decision-making.

Experience

Student - Data and Operations Jan. 2026 – Present

Indigenous Services Canada – Government of Canada *Vancouver, BC*

- Extracted, analyzed, and interpreted quantitative and qualitative information to support operational reporting, program delivery, and evidence-based decision-making
- Prepared briefing materials, reports, presentation content, and supporting documentation for internal stakeholders and management.
- Performed data validation, reconciliation, and quality assurance across enterprise systems, improving reporting accuracy and operational consistency.
- Managed multiple priorities in a fast-paced environment while meeting operational deadlines and supporting high-volume program delivery.
- Collaborated across teams while independently managing high-volume assignments, competing priorities, follow-ups, and time-sensitive deadlines.
- Handled confidential information in accordance with federal privacy, security, access-control, and information-management requirements.

Software Developer Sep. 2026 – Present

SFU Blueprint *Burnaby, BC*

- Developed and enhanced features for an environmental incident reporting platform using Next.js, React, TypeScript, and Tailwind CSS, contributing to a collaborative full-stack codebase.
- Extended an incident reporting form with structured location inputs and emergency reporting resources, improving the organization and usability of environmental incident submissions.
- Updated TypeScript data models and application configuration to support new reporting requirements and maintain consistency across components.
- Used Git and GitHub for feature branch development, version control, and pull request workflows within an Agile software development team.

Geek Squad Agent Sep. 2021 – Mar. 2024

Best Buy *Surrey, BC*

- Troubleshot hardware, software, operating system, mobile device, account, and network incidents, resolving approximately 95% of cases during the initial interaction.
- Performed root-cause analysis, software installation, system configuration, and post-service testing to confirm that implemented solutions operated reliably.
- Documented diagnostic findings, completed service records, and communicated technical issues and resolution steps clearly to technical and non-technical users.

Leadership

Vice President Jan. 2025 – Aug. 2026

SFU Punjabi Student Association *Burnaby, BC*

- Led and collaborated with the executive team to organize cultural, networking, and student engagement events at SFU.
- Coordinated outreach, partnerships, event planning, and team operations to strengthen community involvement and student engagement.

Awards

Academic Award Oct. 2022

Resiliency Award Scholarship Oct. 2021

Certifications

Microsoft Fabric Data Engineer Professional Certificate

Microsoft

Google Data Analytics Professional Certificate

Google

Reliability Status

Government of Canada
